

FARMDIRECT: PROJECT RUN & DATABASE ACCESS GUIDE

COLLABORATION MANUAL FOR AYUSH • ZERO LOCAL DB SETUP REQUIRED

■ **Important Notice for Ayush:** You **DO NOT** need to install PostgreSQL or configure database passwords. FarmDirect uses a **shared Neon Serverless Cloud Database**. By simply setting up your .env file (Step 2), your computer will automatically connect to the real live cloud database, sharing live data with Raajveer in real time!

Prerequisites (Before Starting): 1. **Git** installed (git-scm.com) 2. **Node.js v18+** installed (nodejs.org) 3. **VS Code** or any Terminal

STEP 1: CLONE THE REPOSITORY TO YOUR PC

Where: PowerShell or Command Prompt

Downloads the entire project codebase, dependencies, images, and configuration onto your local machine.

```
> git clone https://github.com/raajveer20/FarmDirect.git > cd FarmDirect
```

STEP 2: CONNECT TO SHARED NEON CLOUD DATABASE

Where: Inside project folder terminal

Creates your .env file pre-configured with the live **Neon Cloud PostgreSQL** connection string. Both you and Raajveer share the same database!

```
> Copy-Item .env.example .env # (Windows PowerShell) > cp .env.example .env # (Mac / Linux)
```

STEP 3: INSTALL PACKAGES & RUN DEV SERVER

Where: Terminal inside FarmDirect folder

Installs React 19, Tailwind v4, Lucide, Recharts & Leaflet. Launches the development server in under 1 second.

```
> npm install > npm run dev
```

STEP 4: OPEN WEB APPLICATION IN BROWSER

Where: Chrome, Edge, or Brave Browser

Navigate to **http://localhost:5173**. The application will load with full database access, real-time tracking, and interactive dashboards.

```
> http://localhost:5173
```
